

CSC Corporate Advisor Robert Brevelle recognized as top innovator

Posted *July 12, 2023* by *Cyberamber*

A member of Cyber Security Services (CSC) corporate advisory board has been recognized as a top innovator.

Cyber Security Services (CSC), a leading cyber security provider for industry and government, announced today that its corporate advisor, Robert Brevelle, has been selected as a top innovator by the Top 100 and RMG. Robert will be featured in multiple news stories and an in-depth magazine interview covering his 20-plus years of innovation in cyber security, electronic warfare, aerospace and defense, image processing, and agritech.

In an interview regarding the selection process, Robert attributed much of his success to having a country boy's work ethic, a lifelong passion for learning, and a will to win inspired by his teachers, military leaders, and coaches. These characteristics would carry Robert throughout his notable career as he worked on leading systems and solutions in a myriad of industries and geographies.

Silicon Valley, California*

"First to the lab and first to volunteer," said Tim Chambers, a former co-worker at L-3 Communications and current Executive Vice President at CSC. "Robert is a hard worker and team builder that gets along fabulously with customers. Robert went from engineer to lead to program manager to vice president in 6 years at a highly competitive Fortune 500 company specializing in cyber, airborne ISR and imaging systems. I remember he received an award from the President in front of thousands of employees. Then Robert was sent to Wall Street where one of his projects was showcased at the annual shareholders meeting."

"Robert's character and work ethic are off the charts," said Justin White, Founder of Selery Fulfillment. "He is smart, passionate, and helpful. He is someone you can always count on." Robert served as a mentor and later on the board of directors with Justin at the award-winning B2B startup focused on e-commerce and order fulfillment solutions.

Robert has mentored engineers and executives from startups to public companies. He believes in giving back so that future innovators can contribute in a positive way

to the community. He is a well-known advocate, supporter, investor, and mentor of minority and veteran-run businesses having received recognition for his work by the SBA, Veterans Administration, and corporate diversity programs.

"His willingness to help was never short of amazing," said Chandler Young, CEO of iJustOrder, a minority-owned and operated business. "When I shared my thoughts or ideas he always gave me full attention and he would build on what I already put out there. I've yet to be able to meet someone quite like him again in my journey of business. His guidance and advice were invaluable in both business and technical expertise. He has become a good friend and mentor, almost like a big brother." Chandler appointed Robert to the board of directors of the highly publicized Texas-based technology firm.

When the US Government established the first Cyber Command nearly 15 years ago, Robert was one of the first industry partners awarded contracts. He also worked on one of the first successful cyber attack systems for the military and other government agencies.

"Robert's career trajectory has placed him into c-level and board type roles, but he is a remarkable technologist and innovator," said Tim. "I know for a fact that several of his systems have been at the forefront of cyber, space-based solutions, and some even saved lives in the wars in Iraq and Afghanistan. His customers at NASA, UK Ministry of Defense, and the US Special Operations Command have truly become his buddies. In this industry, that speaks volumes."

Cyber Security Services is a leading provider of cyber security solutions and contractors for US-based corporations and government agencies. With offices in San Antonio, Shreveport, Atlanta, San Diego, and Washington D.C. we are positioned and staffed to support our customers in all of their cyber needs. We leverage our partnerships with universities and research labs to ensure we are on the cutting edge of technology. Join us as we lead the way in the advancement of cyber solutions.
